PROFESSIONAL SUMMARY

Software Engineering undergraduate with hands-on experience building full-stack web applications using Java, Spring Boot, React, Node.js, Express.js, and TypeScript, combined with a strong focus on software quality and testing. Comfortable designing secure REST APIs, relational and NoSQL databases (MySQL, MongoDB), and JWT-based authentication and role-based access control. Practiced in writing automated API tests (Jest, Supertest), manual and functional testing, and API testing with Postman, alongside solid grounding in object-oriented programming and software architecture. Consistent track record of independently designing, building, testing, and documenting complete applications end-to-end, with an interest in growing into both QA and full-stack engineering roles.

TECHNICAL SKILLS

Languages: Java, JavaScript, TypeScript, SQL, HTML, CSS

Backend: Spring Boot, Spring MVC, Spring Data JPA, Spring Security, REST APIs, Node.js, Express.js

Frontend: React, React Router, Tailwind CSS, HTML5, CSS3

Databases: MySQL, MongoDB

Tools: Git, GitHub, Maven, IntelliJ IDEA, VS Code, Postman, Figma

Concepts: OOP, MVC, REST, JWT, CRUD, DBMS, SDLC/STLC, Design Patterns

SOFT SKILLS

Interpersonal: Leadership, Problem-Solving, Analytical Thinking, Team Collaboration, Adaptability, Continuous Learning, Independence

LANGUAGES

Sinhala (Native) · Tamil (Fluent) · English (Intermediate) · Korean (Intermediate)

PROJECTS

Sri Tech Computer Store — MERN Stack E-Commerce Application

MongoDB · Express.js · React · Node.js

- Collaborated in planning and developing a full-stack e-commerce application for a computer store using the MERN stack.
- Contributed to frontend and backend development, including product management, APIs, database integration, and user-focused features.
- Deployed and hosted the application, gaining practical experience in full-stack development and production deployment.

CeyBride — Full-Stack Sri Lankan Wedding Planning Platform

Java · Spring Boot · Spring Security · JWT · Spring Data JPA · MySQL · React · Tailwind CSS

- Built a full-stack wedding planning platform with a layered Spring Boot backend and a React (Vite) frontend.
- Designed and implemented a rule-based “Wedding Blueprint Generator” that auto-generates wedding tasks, ritual schedules, and starter budgets for a couple's wedding profile.

- Secured the REST API with Spring Security and JWT-based authentication and authorization.
- Used Spring Data JPA and MySQL for relational persistence across wedding profile, guest, task, expense, and vendor modules.
- Built the client interface with React, React Router, and Tailwind CSS v4, covering dashboard, guests, tasks, budget allocations, payments, vendors, and ritual schedule pages.
- Implemented full CRUD across guests, tasks, expenses, vendors, and rituals, plus a dashboard summary view and blueprint regeneration logic.

MediTrack — Patient Medical Record Management System

React 19 · TypeScript · Node.js · Express.js · MongoDB · JWT · Tailwind CSS · Cloudinary

- Built a full-stack patient medical record management system with role-based access for Admin, Doctor, and Receptionist users.
- Developed RESTful APIs with Express 5 and TypeScript, using Mongoose for MongoDB data modeling and persistence.
- Implemented JWT-based authentication and a reusable role-based access-control middleware.
- Added Cloudinary-backed medical image uploads and NIC-based patient search and record management.
- Wrote automated API tests with Jest, Supertest, and an in-memory MongoDB test database to validate auth and patient endpoints.
- Built the frontend with React 19, TypeScript, Vite, and Tailwind CSS v4, including a Recharts-powered analytics dashboard.

Fruity Fizz — Juice Bar Management System (Layered Architecture)

Java 21 · JavaFX · MySQL · JFoenix · JasperReports · Maven

- Built a desktop juice bar management system in Java using a strict layered architecture (DAO – Service – Controller) with JavaFX and FXML for the UI.
- Implemented modules for customer, employee, supplier, item, delivery, booking, and order management, backed by a MySQL database.
- Added JFoenix material-design UI components and OTP-based email password reset and recovery using JavaMail.
- Generated business reports, including orders and employee records, with JasperReports, and used Lombok and Commons BeanUtils to reduce boilerplate across layers.
- Designed the underlying MySQL schema covering all core business entities for the juice bar's day-to-day operations.
